

Instruction to Upgrade MITS-Data Pro Macro File

1. You first need to search and find the file **DAO360.dll** on your PC. If this file is not present, separate steps need to be taken to update the macro.
2. If the MITS Data Pro Macro is already installed you will have an Arbin Data Button in MS Excel (see **Figure 1**).
3. Determine where the macro is installed from by going to <Arbin Data><About MITS Data Pro>. The version will appear in a dialog box (see **Figure 2** and **3**).
4. Use My Computer and navigate to the MITS_Pro\Data folder and double-click on the file **Mits_DataPro_Uninstall.xls**.
5. Select Enable Macros.
6. You will get a dialog box that will tell you MITS Data Pro has been uninstalled.
7. Copy the newer version file **MITS_DataPro.xla** to the MITS_Pro\Data folder and overwrite the old version.
8. Use My Computer and navigate to the MITS_Pro\Data folder and double-click on the file **MITS_DataPro.xla**.
9. Select Enable Macros.
10. Confirm that the newer version is installed by using <Arbin Data><About MITS Data Pro>.
